The PowerPay® debt reduction computer program can analyze options for one to thirty debts. Possible mcreditors might be the overdraft on a checking account, payments to a doctor, installment loans, bank or store credit cards, or home equity line of credit.

PowerPay® can calculate repayment for debts where extra payments are applied to the principle and where there is no pre-payment penalty.

The following information is needed for each creditor: current balance, monthly payment and interest rate (Annual Percentage Rate or APR).
